# Ahan Mondal

8777-242-380 | ahanmondal67@gmail | linkedin.com/in/ahan-mondal | github.com/hineni26

## Education

**Kalinga Institute of Industrial Technology** — Bhubaneswar, Odisha
*Bachelor of Technology in Computer Science* — *Aug. 2023 – May 2027*

**Salt Lake School** — Salt Lake , CA Block, Kolkata, West Bengal
*Primary to Higher Secondary* — *Aug. 2008 – March 2023*

## Projects

**Customer Operations Analytics Dashboard** | *Python, Pandas, Jupyter, Streamlit* — Nov. 2025 – Dec. 2025

- Built an end-to-end customer operations analytics pipeline to process and analyze 20K+ customer support tickets for operational insights and KPI reporting.
- Cleaned, transformed, and structured raw support data into analysis-ready datasets to support workflow optimization and operational reporting.
- Analyzed ticket priority, queue distribution, issue types, and customer segments to identify workload patterns and support resource allocation decisions.
- Created standardized operational datasets for dashboarding to enable data-driven decision-making in customer service operations.
- Applied analytical techniques to convert unstructured ticket information into actionable business insights supporting process improvement initiatives.
- Designed data structure suitable for KPI dashboards tracking service workload, issue categorization, and operational efficiency metrics.

**Sales Performance and Incentive Analytics** | *Python, Pandas, SQL, Power BI, Excel* — Feb. 2026 – Mar. 2026

- Built a sales performance analytics system to evaluate revenue trends, sales efficiency, and incentive structures using data-driven analysis.
- Analyzed sales datasets to identify high-performing segments and generate insights for performance optimization and business reporting.
- Designed KPI metrics for monitoring sales performance, incentive effectiveness, and operational productivity.
- Applied SQL and Python-based data processing to aggregate and transform sales data for analytics and dashboard visualization.
- Developed structured datasets enabling dashboard reporting for management decision-making and operational planning.
- Generated actionable insights supporting process improvement and incentive strategy optimization using analytical modeling.

**Process Optimization and Workflow Analytics** | *Python, Pandas, SQL, Power BI* — Jan. 2026 – Present

- Analyzed operational workflows to identify process bottlenecks and inefficiencies using data-driven analysis techniques.
- Designed and optimized workflow pipelines to improve operational efficiency and support data-driven decision-making.
- Built analytics-ready datasets to monitor process performance, workload distribution, and operational KPIs.
- Applied Python and SQL-based data transformation to standardize workflow data for reporting and dashboard visualization.
- Developed dashboards to track process performance metrics and support continuous improvement initiatives.
- Generated actionable operational insights to enhance workflow efficiency and resource allocation strategies.

## Technical Skills

**Languages**: Java, Python, C/C++, SQL (Oracle), Shell Script, YAML
**Frameworks**: Pandas, NumPy, Streamlit, Power BI, Jupyter Notebook, Git
**Developer Tools**: Git, Vim, VS Code, Jupyter, Excel, CSV Data Processing
**Libraries**: pandas, NumPy, Matplotlib, Scikit-learn
