EDUCATION

Kalinga Institute of Industrial Technology

Bachelor of Technology in Computer Science — CGPA: 8.83 (5 Semesters)

Bhubaneswar, Odisha

Aug. 2023 – Present

Salt Lake School

Class 12 (ISC) – 89.5%(Best of 4) — Class 10 (ICSE) – 95.6%(Best of 5)

Kolkata, West Bengal

2008 – 2023

TECHNICAL SKILLS

Languages: Java, Python, C, SQL, Shell Script

Core Concepts: DSA, OOP, DBMS, CN, Deep Learning, Graph Neural Networks, LangGraph

Frameworks & Libraries: PyTorch, PyTorch Geometric, Pandas, NumPy, Scikit-learn, CatBoost, Matplotlib, Streamlit

Databases: SQLite, SQL(Oracle)

Tools: Power BI, Excel, Git, Linux, Vercel, Vite, Vim, VS Code, Jupyter Notebook

PROJECTS

MedPath AI [Live] | *FastAPI, React 19, LangGraph, Gemini 2.5 Flash, Supabase, JWT*

Jan 2024 – Present

- Built full-stack AI healthcare platform (React 19 + FastAPI) with LangGraph pipeline and Gemini 2.5 Flash for conversational clinical intake, extracting ICD-10 codes, urgency flags, and emergency bypass across 500+ hospital records.
- Engineered multi-factor hospital scoring engine using Pandas and Haversine distance with comorbidity multipliers (diabetes +12%, cardiac +18%) for personalised cost breakdowns; integrated Supabase for real-time loan status tracking.
- Developed Poonawalla Fincorp loan pre-qualification pipeline with CIBIL/FOIR/EMI evaluation, Gemini PDF extraction, JWT auth, and a separate officer dashboard delivering instant GREEN/YELLOW/RED eligibility decisions.

Vehicle Insurance Fraud Detection | *Python, PyTorch, CatBoost, PyTorch Geometric, Scikit-learn*

May 2026

- Engineered multi-modal fusion architecture combining tabular (CatBoost embeddings), temporal (LSTM), and graph (GCN) branches with learned embeddings merged into final DNN classifier
- Implemented class-imbalanced classification pipeline with stratified splitting, weighted loss functions, and focal-loss experimentation; achieved ROC-AUC 0.829 and PR-AUC 0.226
- Built threshold tuning system with precision-recall curve analysis and cost-aware threshold selection (FP/FN cost minimization) for business-aligned fraud detection operating points

Classroom Scheduling System | *Python, SQLite, pytest, OOP*

Jan. 2026 – Feb. 2026

- Developed a classroom scheduling system to automate lecture hall allocation and timetable management for academic institutions.
- Implemented scheduling logic with conflict detection, capacity validation, and auto-assignment algorithms considering room availability and faculty allocation.
- Designed a normalized SQLite database with transaction safety and foreign key constraints for managing classrooms, faculty, courses, and schedules.
- Wrote comprehensive unit tests using pytest and reduced manual scheduling errors, enabling faster timetable generation.

ACHIEVEMENTS

AlgoUniversity Graphs Contest — Rank 10

- Secured Rank 10 within the college in the Graphs Contest organized by AlgoUniversity.
- Qualified for accelerator camp benefits and scholarship consideration based on contest performance.
